

Hola comunidad Kucoin este documento va dirigido a mantenerlos informado sobre los cambios que ha sufrido el precio del BTC en estos últimos meses (Enero, Febrero, Marzo, Abril y Mayo de 2021), principalmente a aquellos que están comenzando a galopar en el trading, de forma tal que puedan hacer sus estrategias sobre la base de una información mas detallada y que limite los errores que la poca experiencia nos hace cometer. Seguidamente explicaremos los diferentes elementos de las tablas para su mejor comprensión.

Leyenda:

Fecha: aparece el día, el mes, el año y la hora (formato militar) en que fueron tomados los datos, el precio más alto y más bajo son referentes para las últimas 24hrs.

Coins: BTC frente al USDT equiparado al dolar, es decir el par de intercambio

Precio: Precio del BTC valorado en USDT. *

24 High: Expresa el valor mas alto que alcanzó la moneda en las últimas 24hrs *

24 Low: Expresa el valor mas bajo que alcanzó la moneda en las últimas 24hrs *

24h Amount USDT: Expresa el monto en USDT que ha sido intercambiado en las últimas 24hrs *

24h Volumen Coin: Expresa el monto o número de monedas que ha sido intercambiado en las últimas 24hrs. *

%VP High: El % aproximado de btc que se comercializó en precios superiores al precio más bajo alcanzado en 24 hrs.

Las otras columnas son predicciones futuristas de como podría variar el precio de la moneda de referencia en las próximas horas, días, semanas o meses, (la fecha exacta solo el mercado lo podría decir) basadas en cálculos de los valores que da el mercado y guarda estrecha relación con el valor del precio de ese momento. Su lectura es ascendente en el caso de los valores positivos y descendente en el caso de los valores negativos, de esta forma se podrían establecer escalones por los que transitaría el precio en caso de subir o bajar. Los cálculos para obtener estos futuros han sufrido algunas correcciones durante estos meses acercando más su predicción.

Ojo: el mercado no es solo números, las leyes, las noticias, incluso las opiniones de muchas personalidades e instituciones influyen también en la volatilidad del precio. Por lo tanto siempre haga un análisis profundo a la hora de realizar su inversión, más aún si va a configurar un bot de trading.

No se asombre por algunos valores de los futuros que aquí se dan, el mercado da muchas vueltas. Para que se tenga una idea el 2 de marzo XEM se cotizó a un valor de 0,86415 usdt y el día 12 de marzo de 2021 su valor se depreció hasta 0,317, significando una depreciación del 63,32% en solo 10 días
